Bi-Weekly Investment Outlook

Sunday April 9th 2006 Issue # 240

"Observation. Experience, memory and mathematics- These are what a successful trader must depend on. He must not only observe accurately but remember at all times what he has observed. He cannot bet on the unreasonable or on the unexpected, however strong his personal convictions maybe about man's unreasonableness or however certain he may feel that the unexpected happens very frequently. He must bet always on probabilities--that is try to anticipate them. Years of practice at the game, of constant study, of always remembering, enables the trader to act when the unexpected happens as well as when the expected comes to pass. A man can have great mathematical ability and unusual power of accurate observation and yet fail in speculation unless he also possesses the experience and memory "--Reminiscences of a Stock operator
